Specialty Melon Variety Trials

Specialty melons are an ideal high-value crop for protected culture. From ‘Galia’ muskmelons to ‘Charentais’ cantaloupes, there is quite a variety to please every palate. Several trials have been done at the UF Protected Agriculture Research complex that have evaluated many specialty type melons.

Currently, there are 27 melon lines from two seed companies in production at the UF Protected Ag complex. These lines will be evaluated based on their performance, fruit yield and quality.
