**Eptam 7E 24c Label on Tomato**

By Dr. William Stall, Professor, Horticultural Sciences Department

Eptam 7E has received a 24c special local needs label for use on transplanted tomatoes grown on plastic mulched beds.

Application should be at 3-4 pints per acre pre-transplant to the bed top and shoulders immediately prior to the installation of the plastic mulch. Do not transplant tomato plants for a minimum of 14 days following an application of Eptam.

Weeds controlled include annual grasses, annual broadleaf weeds and purple and yellow nutsedge.
